SME
FALL
WEBINAR SERIES

...in November

The Society for Mining, Metallurgy, and Exploration (SME) is pleased to announce the November edition of the **SME FALL WEBINAR SERIES**. Webinars are a cost effective way to bring you together with leaders in the industry without travel expense and inconvenience.

Robert McIvor

Chief Metallurgist-Grinding Systems, Metcom Technologies, Inc.

“Plant Performance Improvements through Increased Grinding Circuit Classification System Efficiency”

“Classification System Efficiency (CSE)” is a simple, powerful concept which is used to increase ball milling circuit efficiency. This presentation defines “CSE” and reviews case studies demonstrating its use to increase grinding circuit efficiency, from 3 to 30 percent, through manipulation of the pump and cyclones. The increased effective mill grinding energy is recaptured from energy that was going into over grinding, which can also significantly improve downstream performance. The achievable CSE for any given ball milling circuit is described.

Rob McIvor has devoted his career to the design and optimization of mineral grinding circuits. He is founder and Chief Metallurgist – Grinding Systems, of Metcom Technologies, Inc., based Marquette, MI, USA. He has a degree in Mining Engineering from the University of Saskatchewan, and in Mineral Economics and Metallurgical Engineering from McGill University, Montreal.

\$45 SME Member

\$90 Nonmember

To register:

- Go to <https://smenet.webex.com>
- Find the webinar you want to register for
- Click on the title of the webinar for more information (e.g., date, time, etc.)
- Click the “Register” button
- Follow the directions provided on the registration page to complete your registration
